Forecast for Sunday 09 Apr 2023

Weather: Patches of valley mist and fog likely around dawn, especially across the east of the park. This gradually clearing during the morning to leave a fine and generally dry Easter Sunday. Rather extensive high cloud will limit the strength of the sunshine later in the day. Cloud thickening from the west in the evening, bringing the odd spot of rain towards midnight. Mainly light winds in the morning, but turning breezy later, windy on summits.

Chance of cloud-free hill tops above 600m: 70% in the west, 30% in the east overnight and early morning. Becoming greater than 95% from mid-late morning.

Low cloud and visibility: Mist and fog potentially shrouding some lower level routes below 500m at first, especially in the east. Higher tops perhaps remaining above the mist and fog, but may briefly become obscured as this lifts during the morning. Cloud will be above the tops from late morning with very good views during the afternoon. Very good visibility by day, but occasionally a few kilometres or less in any early mist or fog and just below 10 kilometres in any rain towards midnight.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

It will feel rather warm in places, especially sheltered valleys. Breezier conditions on peaks and ridges will contribute to a colder feel here, so make sure that appropriate clothing is worn. Sun protection is advised given the potential for strong sunshine during the day.

Recent rainfall: measured at Cat & Fiddle: altitude 511m

02:00 on Sun 09 Apr 2023	0.2mm	0.2mm	4.6mm

Forecast for Monday 10 Apr 2023

Weather: Strong wind with outbreaks of rain spreading east overnight, clearing by early daytime. A much colder day follows with a mix of sunny spells and then occasional fast-moving showers during the afternoon and evening; these perhaps squally in nature and with a risk of hail and thunder. Remaining breezy, especially in and around any showers.

Maximum wind: South becoming south-westerly 25-30mph, gusting 35-40mph.

Chance of cloud-free hill tops above 600m: Lowering to 30% overnight. Improving to 70% by morning as rain clears.

Low cloud and visibility: Extensive cloud lowering around 300-500m overnight, especially on western slopes. As rain clears cloud generally lifting clear of summits, but suddenly deteriorating in showers that follow, with cloud height highly variable, perhaps lowering to 400-600m at times. Excellent visibility between the showers and below the cloud base, but falling to a few kilometres in showers in general.

Temperature: **Valleys:** Plus 9 Celsius lowering to Plus 6 Celsius.
At 600m: Plus 7 Celsius lowering to Plus 2 Celsius.
Freezing level: Above summits.
